

Black Hole MD Tank instructions

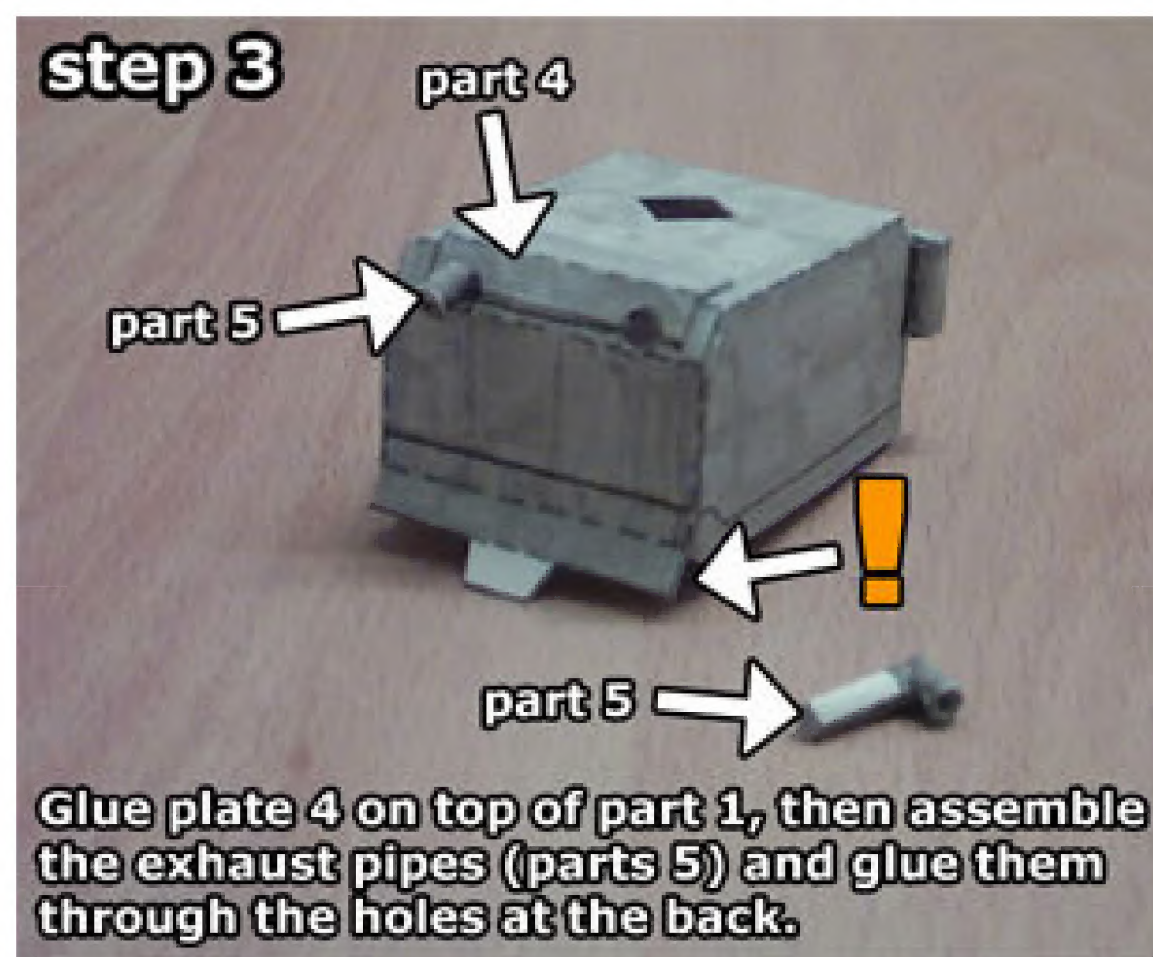

step 1

step 2

step 3

step 4

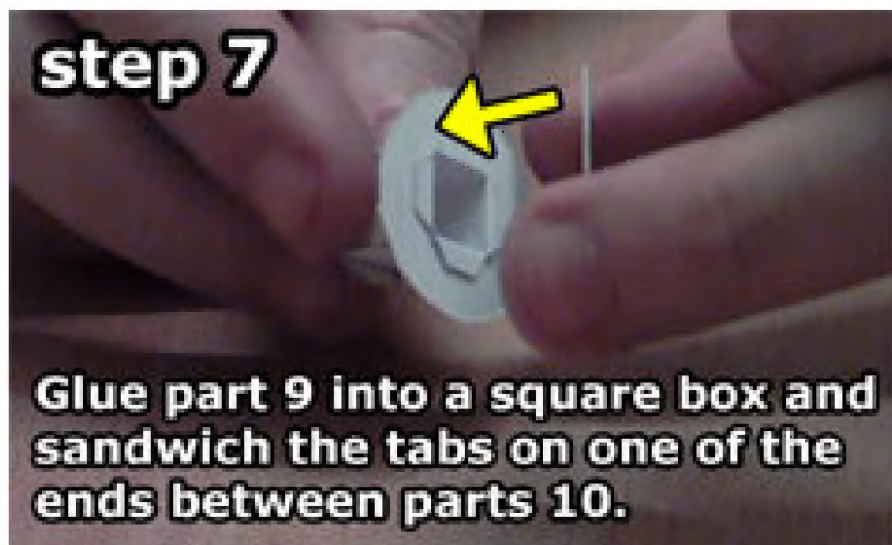

step 5

step 6

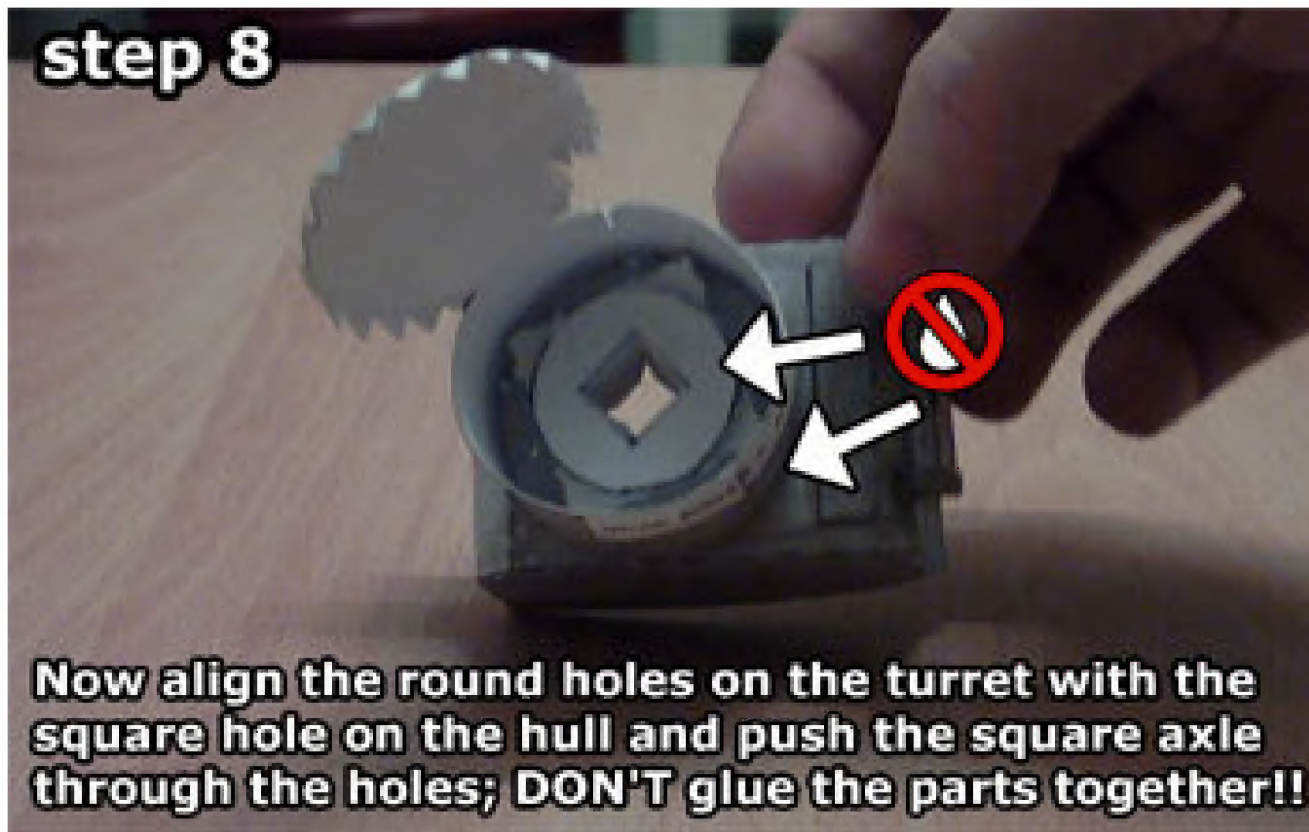

step 7

Glue part 9 into a square box and sandwich the tabs on one of the ends between parts 10.

step 8

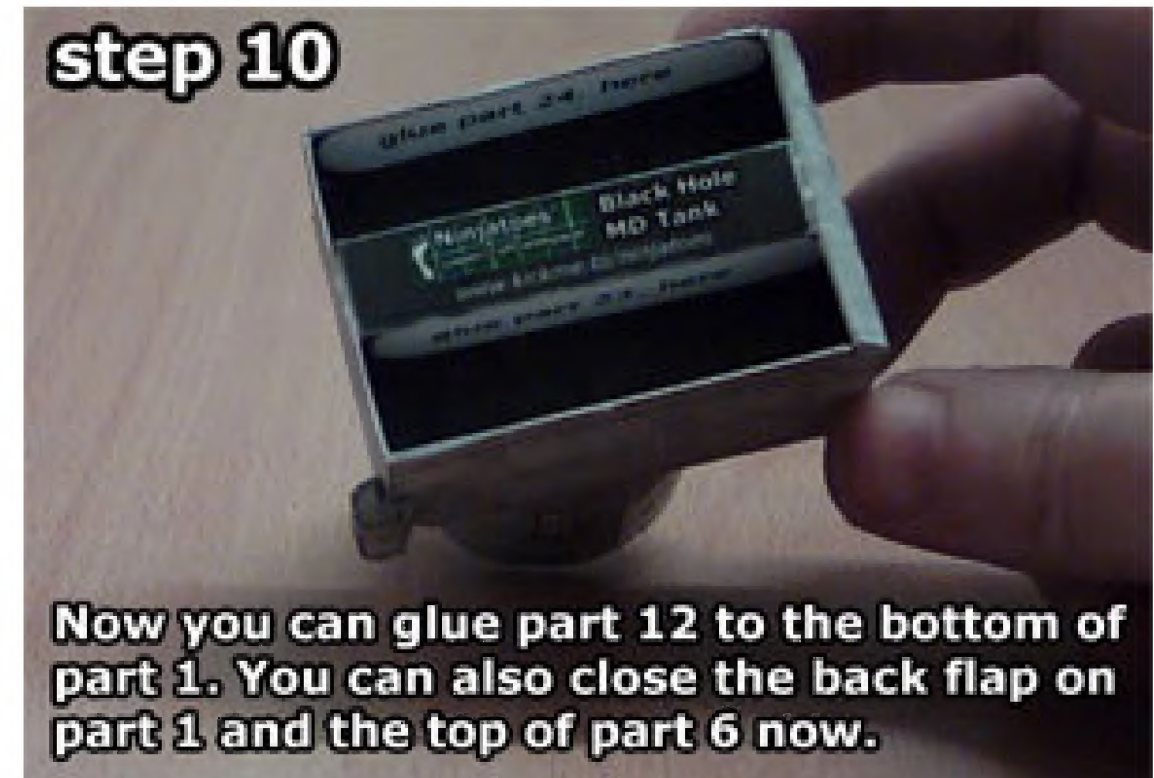

Now align the round holes on the turret with the square hole on the hull and push the square axle through the holes; DON'T glue the parts together!!

step 9

Turn over the tank and fold back the tabs on part 9 and glue them to the inside of the hull, and part 11 if you want to for extra security. Make sure you don't spill any glue that might cause the turret to get stuck to the hull.

step 10

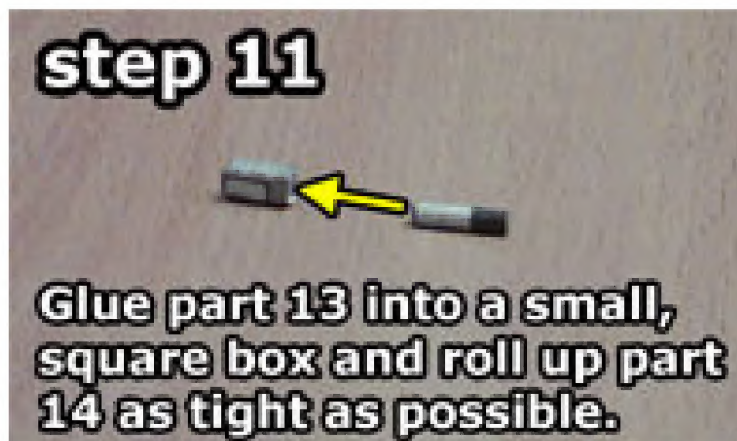

Now you can glue part 12 to the bottom of part 1. You can also close the back flap on part 1 and the top of part 6 now.

step 12

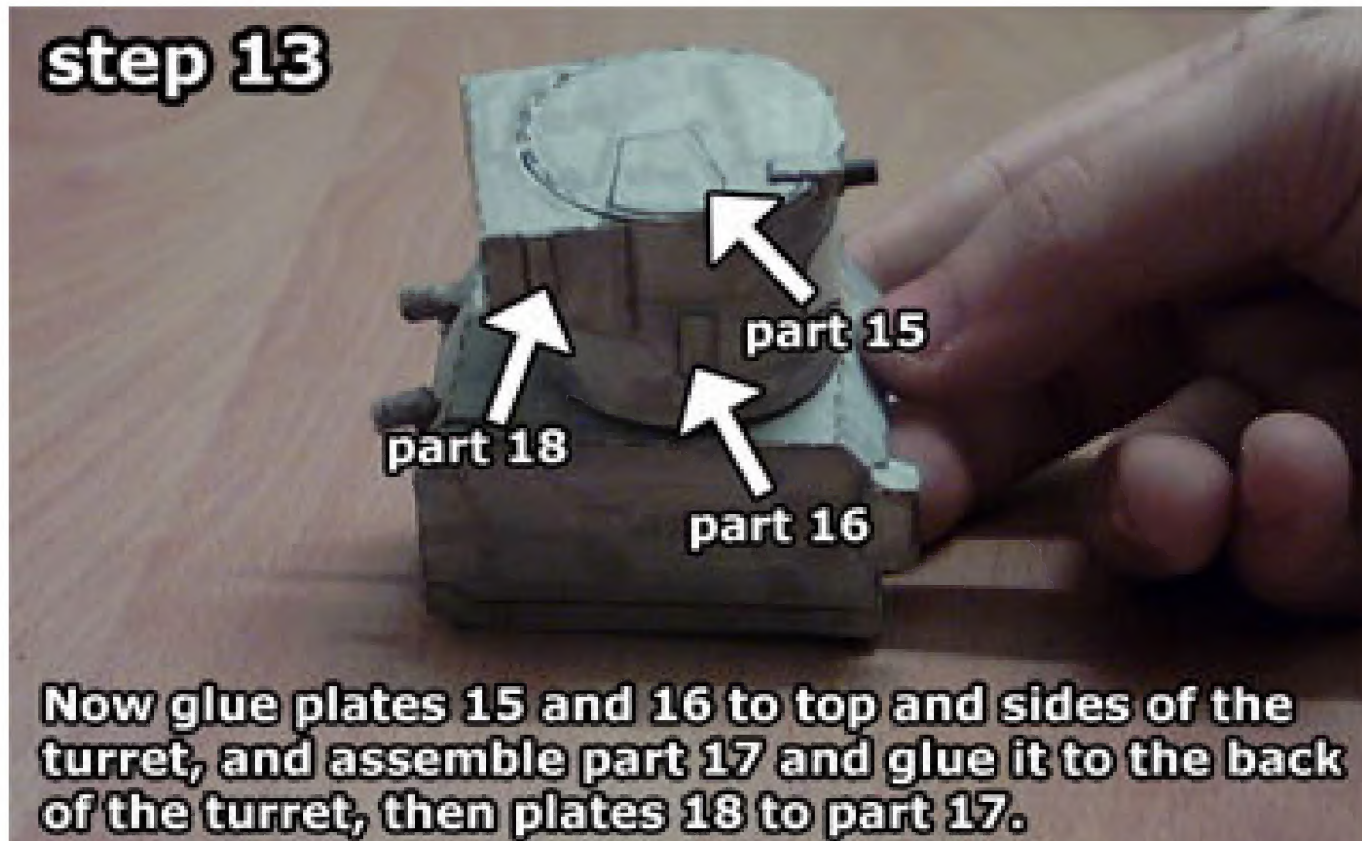

Glue part 13 to the small nook on the turret, and part 14 inside.

step 11

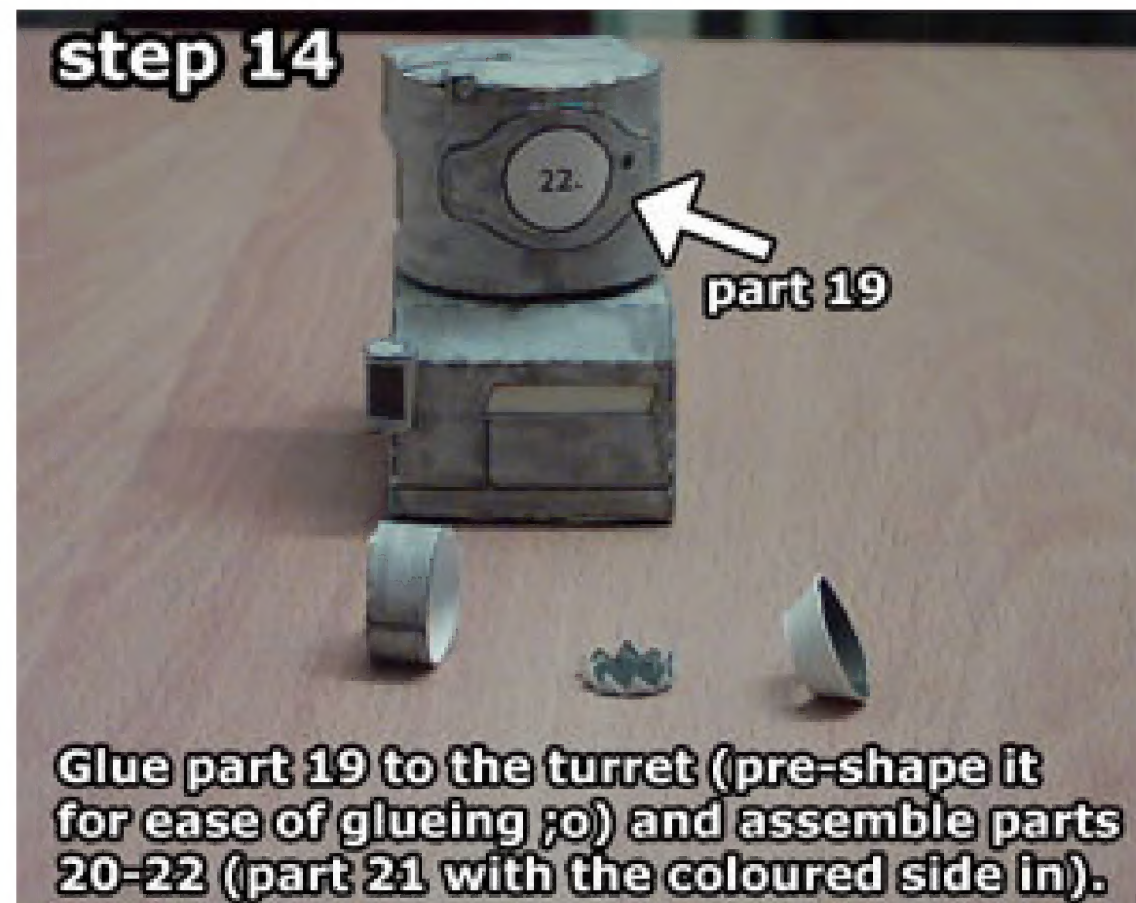

Glue part 13 into a small, square box and roll up part 14 as tight as possible.

step 13

Now glue plates 15 and 16 to top and sides of the turret, and assemble part 17 and glue it to the back of the turret, then plates 18 to part 17.

step 14

Glue part 19 to the turret (pre-shape it for ease of glueing ;o) and assemble parts 20-22 (part 21 with the coloured side in).

step 15

Glue parts 20-22 together and then glue the assembled cannon to the turret.

step 16

Assemble parts 23-26 (the treads) and glue them to part 12 underneath your tank.

step 17

**Black Hole
MD Tank**
